EQUATOR RESOLUTION

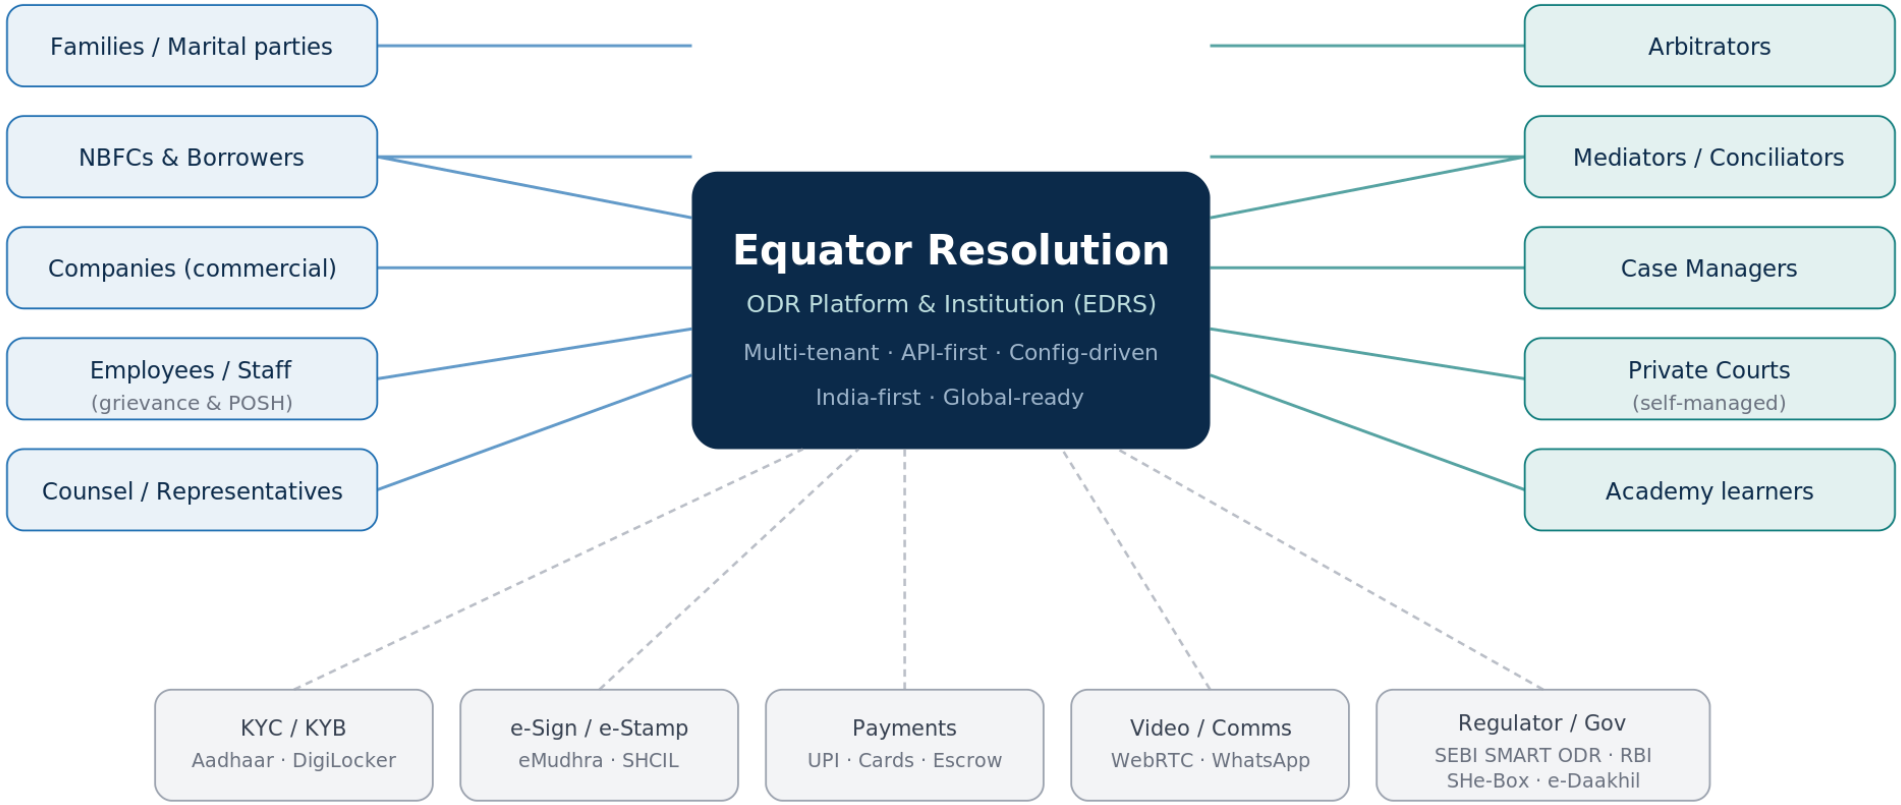

Architecture Diagrams

Online Dispute Resolution Platform — Mediation · Arbitration · Conciliation · Grievance Redressal

v1.0 · June 2026 · Confidential

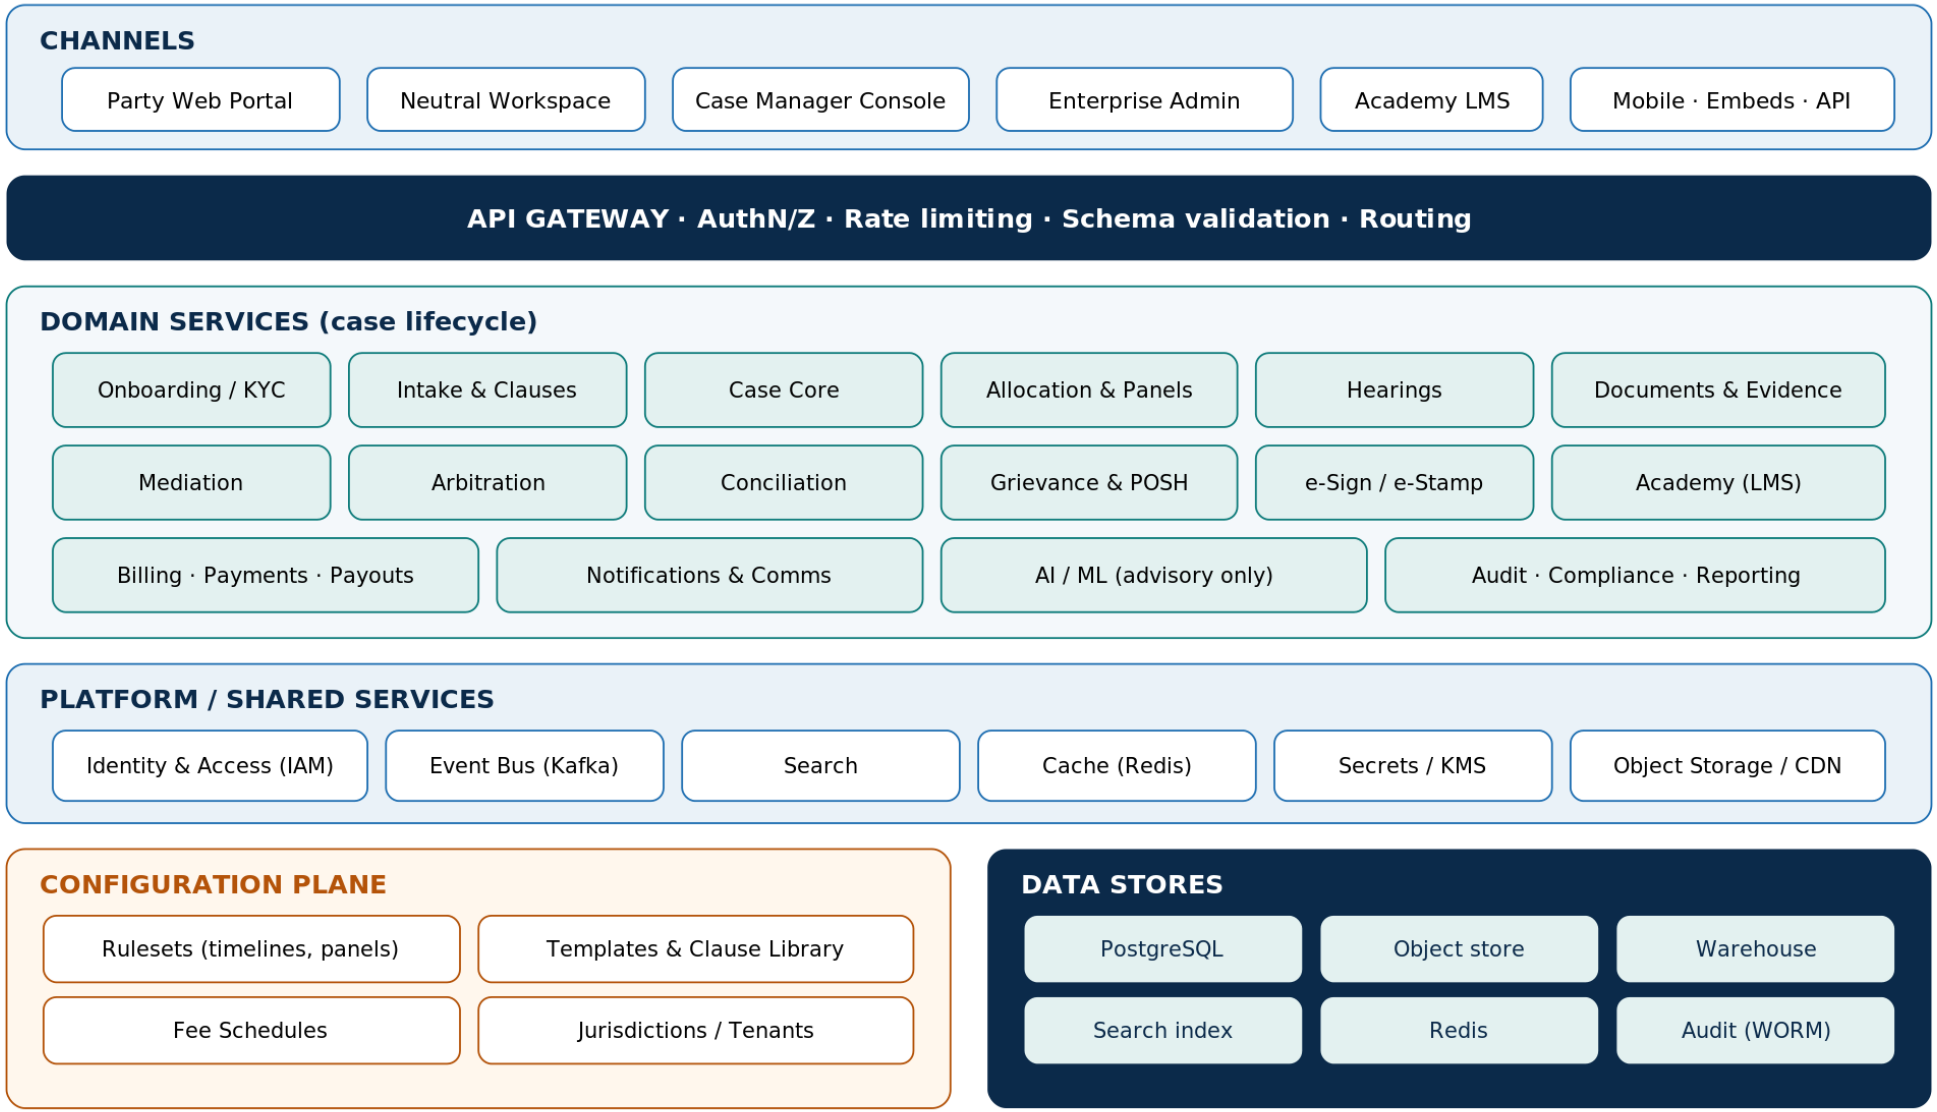

1 · System Context — Who uses Equator, and what it connects to

The platform (centre) sits between the people who use it (left/right) and the external services it orchestrates (bottom). Two business pathways for co…

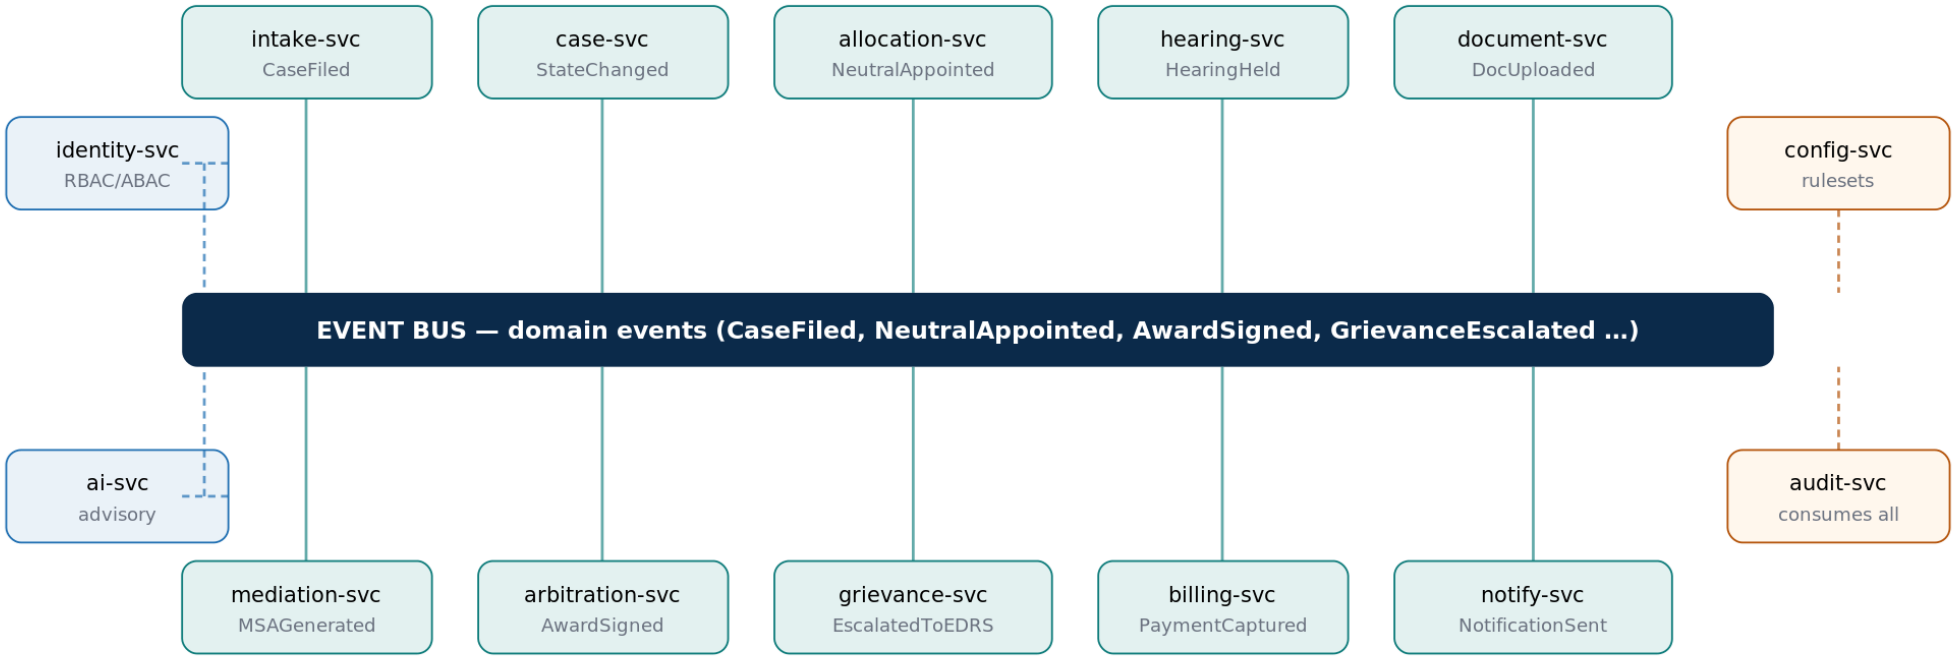

2 · Layered Architecture — From channels to data

A thin channel layer over an API gateway, fronting domain services grouped by the case lifecycle, all standing on shared platform services and a confi…

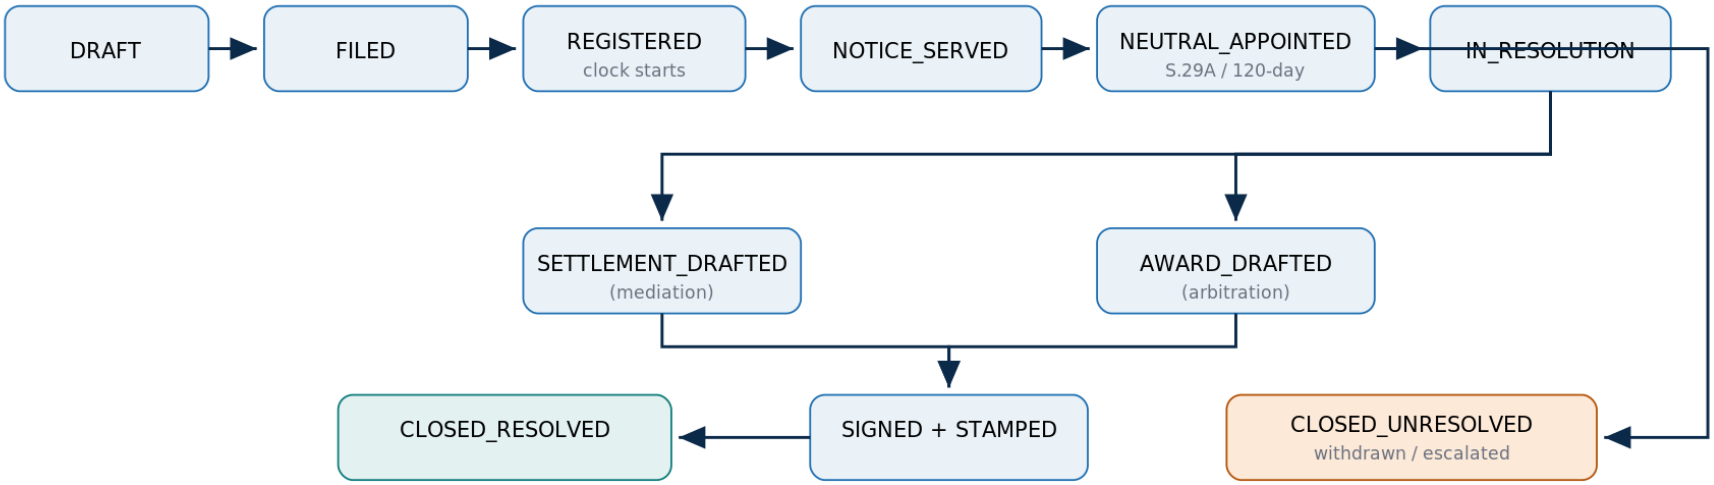

3 · Microservices & Event Flow

Each service owns its data and talks to others via the event bus. The audit service is a pure consumer of every event. A representative slice is shown…

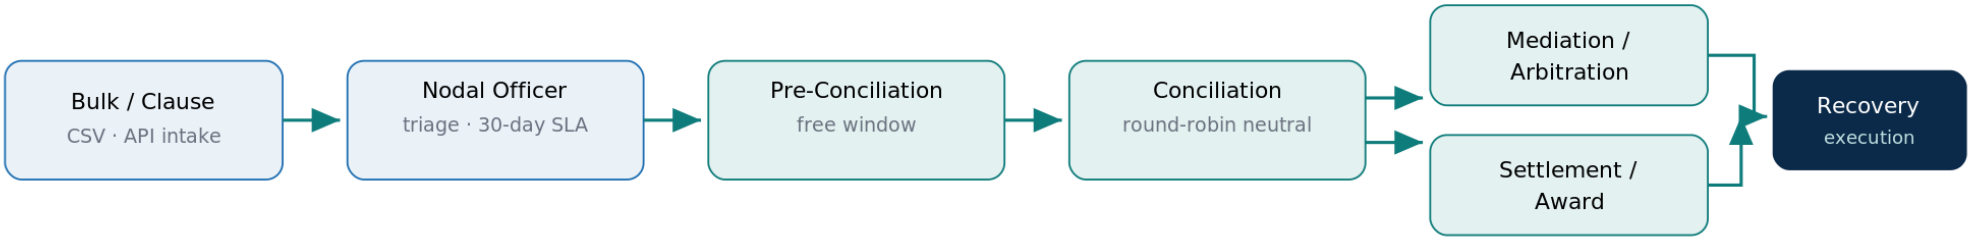

4 · Case Lifecycle State Machine

One configurable state machine drives every pillar; each pillar's pathway selects which states and timers apply. Green = resolved, amber = unresolved/…

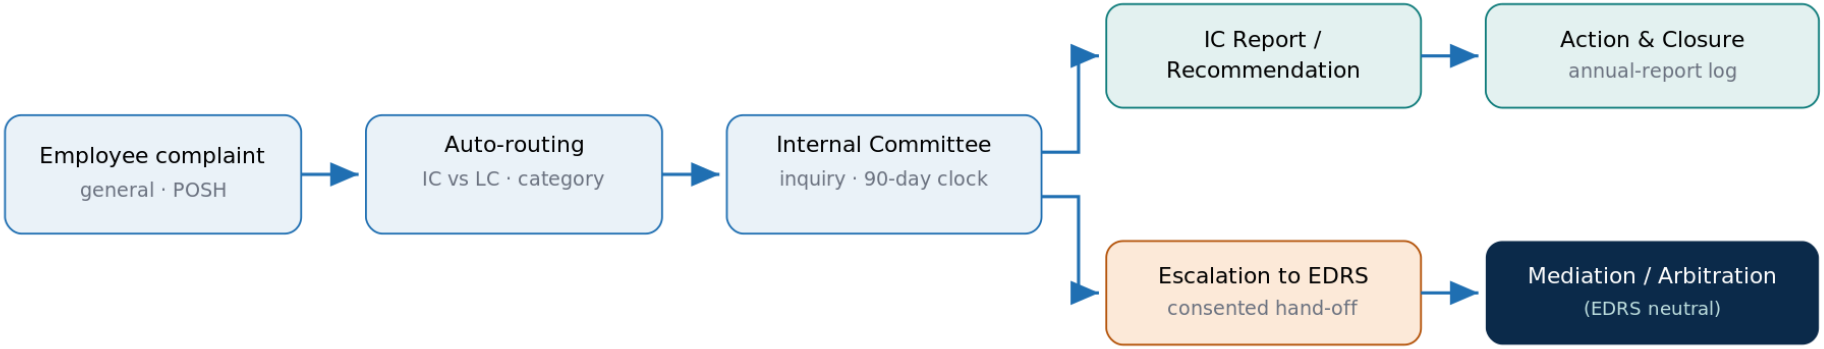

5 · NBFC ↔ Borrower Escalation Ladder (SEBI SMART-ODR pattern)

High-volume, clause-driven. Bulk intake feeds a conciliation-first ladder; round-robin allocation to empanelled neutrals; awards/settlements flow to r…

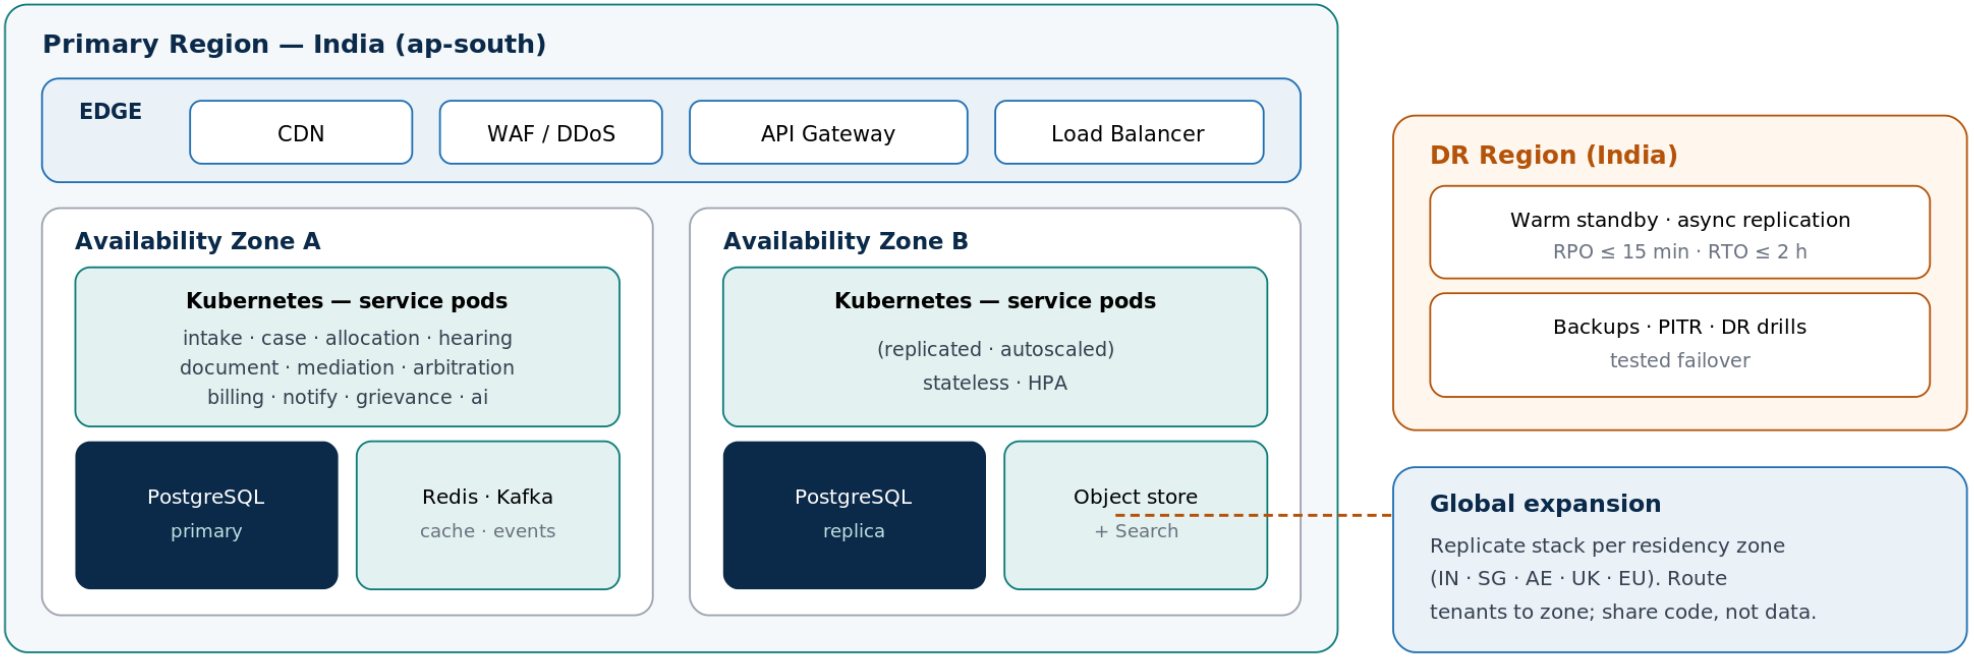

6 · Enterprise Grievance & POSH Flow (SHe-Box pattern)

Single-window intake auto-routes to the Internal Committee; the 90-day POSH clock and strict confidentiality apply; unresolved matters hand off to EDR…

7 · Deployment Topology (cloud, India-first, multi-AZ)

Primary Indian region with multi-AZ HA; a second Indian region for DR. Public edge (CDN/WAF/gateway) fronts private service and data subnets. Global e…

8 · Core Data Model (ERD — central entities)

The relational heart. Full schema (60+ tables, ~190 columns) is in the Forms & Database Specification. Crow's-foot lines show one-to-many (fork) relat…
